                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq

Outer surface protein C precursor - Lyme disease spirochete (strain PBre) C.Species: Borrelia burgdorferi (Lyme disease spirochete)
A; Variety: strain pBre
C; Date: 06-Dec-1996 #sequence_revision 14-Feb-1997 #text_change 26-May-2000 C; Accession: S69918; 572674; I40103
R; Jauris-Heipke, S.; Liegl, G.; Preac-Mursic, V.; Roessler, D.; Schwab, E.; J. Clin. Microbiol. 33, 1860-1866, 1995
J. Clin. Microbiol. 33, 1860-1866, 1995
A; Title: Molecular analysis of genes encoding outer surface protein C (OspC)
A; Reference number: I40047; MUID:95395018
A;Reference number: 140047; MUID:95395018
A;Accession: S69918
A;Status: nucleic acid sequence not shown
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                          S69918

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHARACTERISTIC OF ALPHA-HELICAL STRUCTURES. THIS REGION IS INTERRUPTED BY A HINGE AND JOINED BY A NONHELICAL TAILPIECE WHERE THE REGULATORY PHOSPHORYLATION SITES RESIDE.

MISCELLANEOUS: THE HINGE REGION MAY PLAY A KEY ROLE IN MEDIATING THE EFFECT OF HEAVY CHAIN PHOSPHORYLATION ON ENZYMATIC ACTIVITY. SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.

Nucleic Acids Res. 16:7205-7205(1988).

-i FUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ IS THOUGHT TO MEDIATE THE ATTACHMENT, MIGRATION, & ORGANIZATION OF CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING ENTRY ONLY ENTRY OF THE EXTRACELULAR MATRIX COMPONENTS.

-i SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE TO EACH OTHER BY DISULTIDE BONDS INTO A CROSS-SHAPED MOLECULE TO EACH OTHER BY DISULTIDE BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END.

-i SUBCELLULAR LOCATION: BASEMENT MEMBRANES (MAJOR COMPONENT).

-i DOMAIN: THE ALPHA HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT DOMAIN: THE ALMININ OF FORM A COILED COIL STRUCTURE.

-i SIMILARITY: CONTAINS I LAMININ N-TERMINAL DOMAIN (DOMAIN VI).

-i SIMILARITY: CONTAINS 1 LAMININ EDGET-LIKE DOMAINS.

-i SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EMBL; M58417; AAA28665.1; --

```
C -!- FUNCTION: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2
C -!- SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2
C HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)
C AND 2 REGULATORY LIGHT (TARIN SUBUNITS) (MLC-2).
C -!- SUBCELULAR LOCATION: THICK FILAMENTS OF THE MYOFIBRILS.
C -!- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING
C YCLES OF A 28 RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,
C -!- PIM: TWO CYSTEINE RESIDUES IN THE 51 DOMAIN ARE SELECTIVELY
C -I- MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT
MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). IT CAN LATER BE
C SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright.
